Fire Danger Pocket Card for:

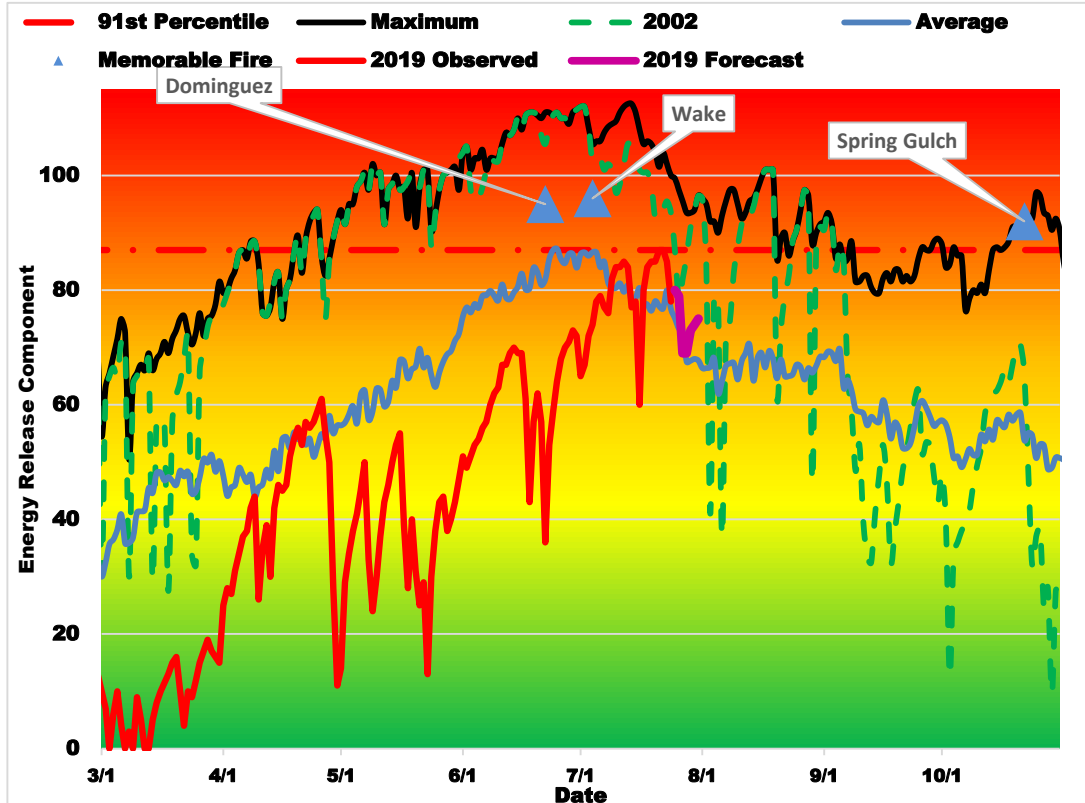

ERC - Fuel Model G - Short-Needle (Heavy Dead)

7/25/2019

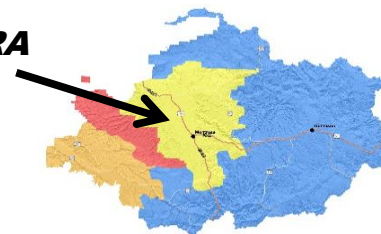

Predicted

Montrose FDRA Local (Critical) Thresholds & Forecasts: Any of these factors will significantly increase the risk for extreme fire behavior. The more factors present, the greater the risk (Orange highlighted fields in forecast days below). The Severe Fire Weather Potential Index compares ERC and BI percentiles per day and assigns an adjective. Severe conditions only occur when both the ERC and BI are above the 97th percentile for that day. Nearly all large fire days occur under Severe SFWP ratings.

Montrose FDRA (in yellow)

Montrose Fire Danger Rating Area large fires generally occur when ERC is 88 or greater in combination with other local threshold values. Terrain primarily consists of river valleys and surrounding gentle slopes and some deep canyons. Fuels ranging from grassland to Gambel oak and PJ can cause rapid fire spread if windspeeds are in excess of 10 mph. Gambel oak live foliar moistures of less than 95% can lead to extreme fire behavior. Drought and frost-kill can also lead to extreme fire behavior throughout the FDRA.
